

# PSO Time-Of-Day Pilot Program

---

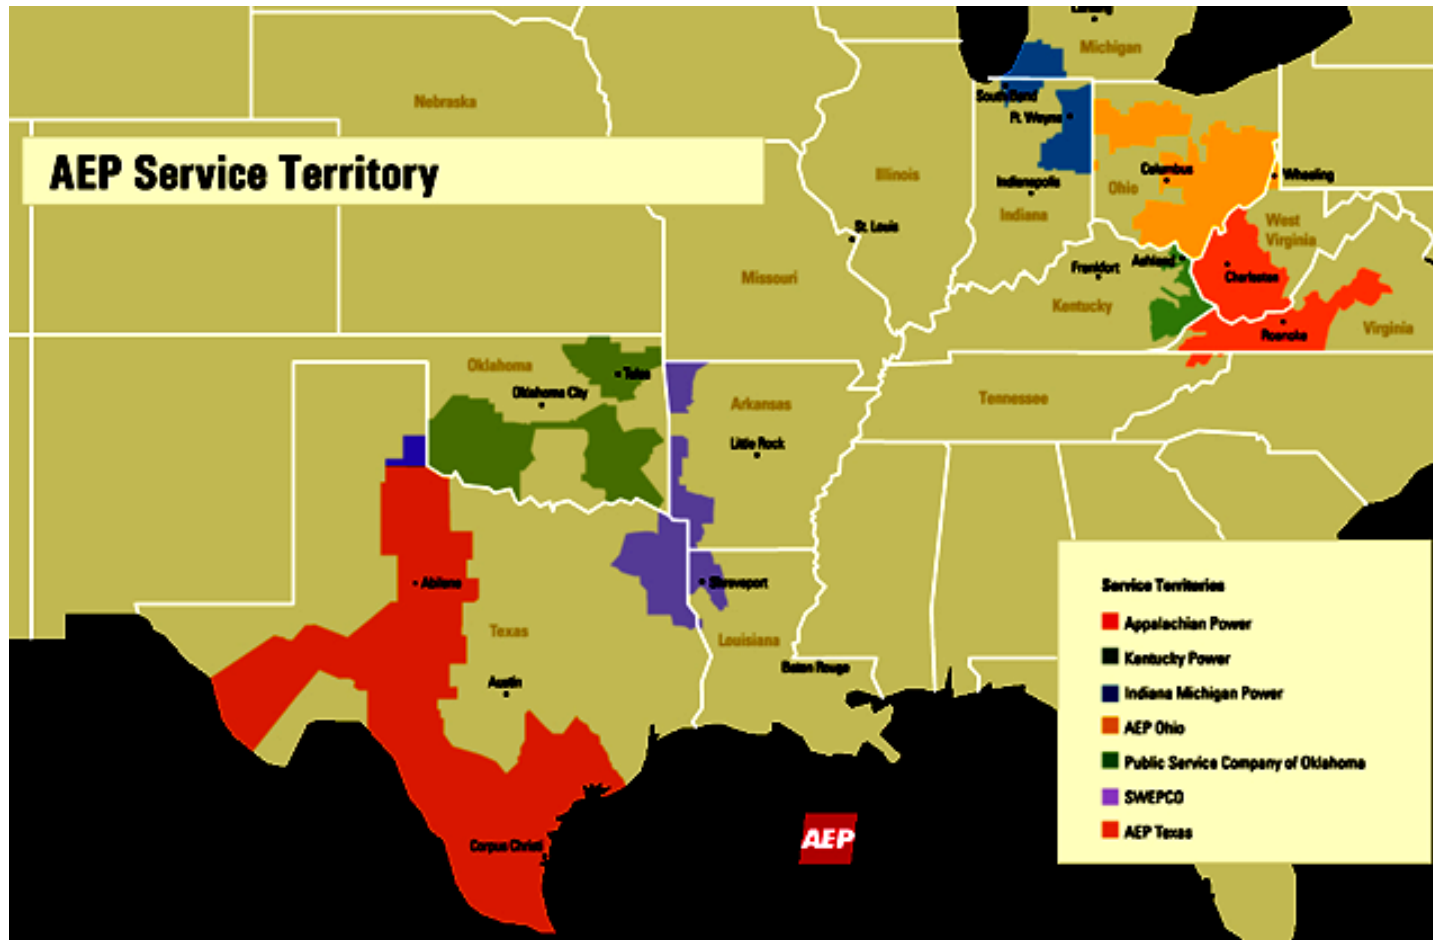

## Project Review & Initial Results

by Bruce Limke

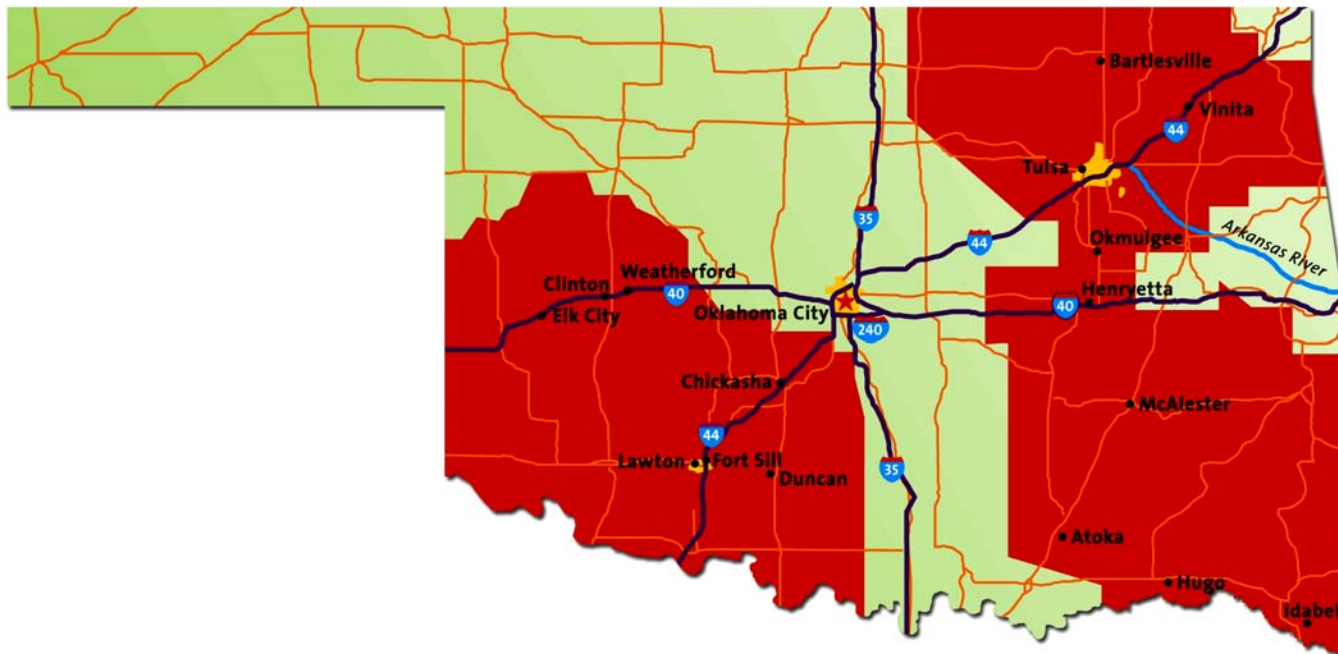

2008 AEIC Annual Load Research Conference  
Oklahoma City

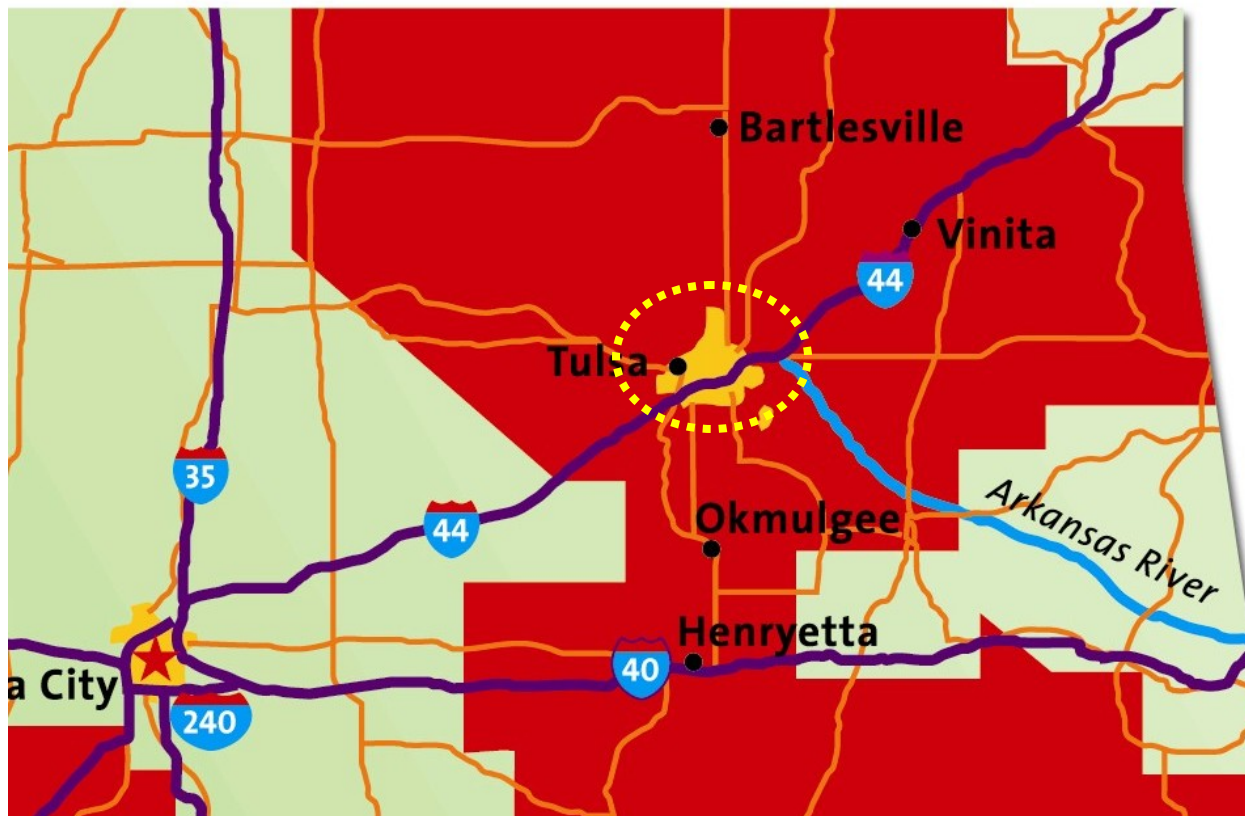

# AEP System Map

# PSO Service Territory

# Tulsa Metro Area – TOD Pilot

# Outline

---

- Background & Pilot Objectives
- Details of the Pilot Design & Tariffs
- Recruitment & Metering Installation
- Participants Survey
- Comparison of Survey Responses to Actual Behavior
- Next Steps

# Recent Timeline of AEP/PSO DSM Activity

---

2003: PSO agrees with OCC request to consider new Time-Of-Day and other DSM offerings.

2006: PSO offers Time-of-Day Pilot programs to Residential and (2) Commercial classes as part of rate filing package. (approved 2007)

Summer 2007: AEP begins multi-year gridSMART<sup>SM</sup> implementation; a suite of customer programs and advanced technology initiatives including distribution grid management (DA/AMI), distributed resources, and internal efficiencies.

Spring 2008: As part of Final Order from 2006 case, OCC gives approval of PSO package of several "quick-start" DSM programs to help customers use electricity more efficiently & slow the annual rate of growth in energy usage. First full-year targets: 20,000 MWH energy conservation, 14MW peak demand reduction, plus environmental benefits. (These are in addition to the TOD Pilot)

Summer 2008: PSO Time-of-Day Pilots begin.

# TOD Pilot Objectives

---

- To demonstrate the commitment to pursuing DSM initiatives.
- To gain experience and resolve process issues.
- To learn how customers respond to the offering both in terms of price response and specific actions taken to save money and/or energy.
- 3-year pilot will allow PSO time\* to build the support systems needed to have a successful TOD offering.
- Also will allow time\* for a successful review to determine the changes required to transition from a pilot to a permanent offering.

\* Timeline for AEP's gridSMART™ in Oklahoma → ???

# TOD Pilot Specifics

---

- **Designed for Residential, General Service, and Low-Use General Service classes.**
- **Target of 100 participants in each class.**
- **Restricted to Tulsa metro-area accounts to accommodate special metering maintenance & other site visits as needed.**
- **3-year pilot window – minimum 12 months participation requested.**
- **Billed through mainframe CIS (some new programming required).**
- **Meters read by Meter Readers on normal cycle routes wherever possible.**
- **Meters have (2) programs loaded: a TOD program capturing billing determinants and an IDR program to capture interval data for load research analysis of pilot.**
- **Residential: Single-family, homeowner, primary residence.**
- **GS/LUGS: Single-metered accounts, no consolidated billing**

# Tariff Specifics

## Residential

---

- Off-Peak Season: November - May
- On-Peak Season: June – October
- Energy Charge:
  - On-Peak Season
    - 9.20¢ per kWh, Mon-Fri, 2:00p to 7:00p
    - 5.00¢ per kWh, All other hours
  - Off-Peak Season
    - 5.80¢ per kWh for first 475 kWh
    - 5.00¢ per kWh for the next 775 kWh
    - 4.33¢ per kWh for all additional kWh
- “No-risk” program – customer billed the lower of the TOD or standard rate.
- Customer bills show total usage and the usage in the TOD window and the amount saved during that billing period.

# Tariff Specifics

## Low Use General Service

---

- Off-Peak Season: November - May
- On-Peak Season: June – October
- Energy Charge:
  - On-Peak Season
    - 9.64¢ per kWh, Mon-Fri, 2:00p to 7:00p
    - 4.44¢ per kWh, All other hours
  - Off-Peak Season
    - 5.27¢ per kWh for first 1,200 kWh
    - 4.44¢ per kWh for all additional kWh
- “No-risk” program – customer billed the lower of the TOD or standard rate.
- Customer bills show total usage and the usage in the TOD window and the amount saved during that billing period.

# Tariff Specifics

## General Service

---

- Off-Peak Season: November - May
- On-Peak Season: June – October
- Energy Charge:
  - On-Peak Season
    - 10.18¢ per kWh, Mon-Fri, 2:00p to 7:00p
    - 4.54¢ per kWh, All other hours
  - Off-Peak Season
    - 5.90¢ per kWh for all kWh up to a level =  $(150 * \text{Max kW})$
    - 5.40¢ per kWh for next kWh block =  $(150 * \text{Max kW})$
    - 4.54¢ per kWh for all additional kWh
- “No-risk” program – customer billed the lower of the TOD or standard rate.
- Customer bills show total usage and the usage in the TOD window and the amount saved during that billing period.

# TOD Project - Recruitment

---

- AEP Load Research staff generated lists of randomly selected PSO customers who met the pilot program eligibility requirements.
- From those lists, Customer Services & Marketing staff performed mailings to residential customers and mailings and/or phone calls as applicable to commercial customers to solicit participation in the TOD pilot.
- Customer contacts continued until the target of ~100 participants in each of the RES, LUGS, & GS classes were reached.
- Site visits to customers interested in participating were conducted to identify any barriers to participation (access issues, incompatible meter base, etc.) and replacements were recruited as needed.

# TOD Project - Installation

- Meters installed prior to first day of billing cycle of first on-peak month. Equipped with TOD and IDR programs. Install Cost = \$50/meter
- Read by Meter Readers on normal routes. Billing determinants uploaded to CIS system. Pulse data loaded into HHF files for MV90 import.
- Additional equipment & data processing cost = \$50/meter.

# Participants Surveys

---

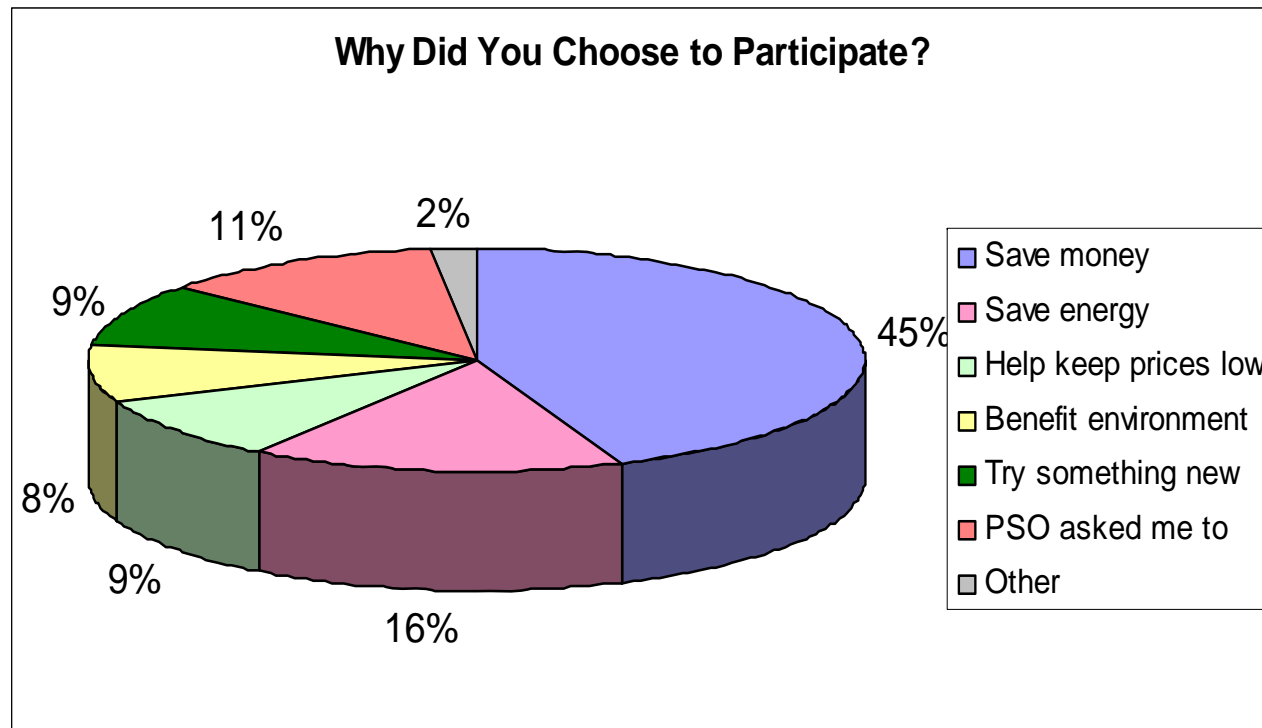

- Sent to all participants in late June/early July
- Response rates: 58% Residential; 47% GS/LUGS
- Most had 1 or 2 months of participation on the pilot at the time of the survey.
- Survey topics:
  - Reasons for participating
  - Expectations of savings/Benefits of Program
  - Plans to alter consumption? (when?/how much?/challenges?)
  - Plans to purchase energy saving equipment?
  - Building info: (age, size, how energy efficient, etc.)
  - Types of appliances & electronic devices & quantities
  - Heating & Cooling systems & fuel sources
  - Occupancy during peak pricing & other demographics
  - Hours of operation, business type (GS/LUGS)
- 1-page for Residential, 3-pages for Commercial

# Analysis Of Survey Responses

## Residential

---

### Other Responder Demographics:

- 75% said someone is at home during the summer afternoon peak pricing period
- 74% of homes have 1-3 residents during summer (2 residents – 48%)
- Head-of-Household is age 40 or greater in 84% of responses (60 yrs or older – 50%)
- 93% have some level of college or vocational education (68% college graduates / advanced degrees)

# Analysis Of Actual Response Residential

---

## Does Usage Reflect a Response?:

- No Control Group designed (yet) for comparison.
- Active PSO residential load research sample used as proxy.

Stratum 1:	Low-use residential
Stratum 2:	Regular residential
Stratum 3:	High-use residential
- TOD Pilot does not include low-use customers. Compared aggregation of TOD Pilot participants to aggregation of Stratum 2&3 contributors of sample. Ratios of Regular to High-Use roughly the same in both.
- Developed normalized average daily load profiles for June for both groupings as a comparison.

# Analysis Of Survey Responses GS/LUGS

## GS

## LUGS

**What Benefits Do You Think  
the TOD Plan Offers?**

- More aware of WHEN electricity used
- More concious about HOW to reduce use
- More concious about PEAK usage
- Greater control over cost
- Benefits the environment
- Other
- No benefit

# Analysis Of Survey Responses GS/LUGS

---

## On Energy-Efficiency Investing:

- Approximately 90% of responders indicated they have not invested in equipment or technologies (Lighting, HVAC, Control/Monitoring) to better take advantage of Time-of-Day or similar pricing programs.
- Likely to invest in the future?
  - Lighting: 22% / 35% say Yes
  - HVAC: 26% / 24% say Yes
  - Control/Monitoring: 27% / 15% say Yes

# Analysis Of Survey Responses

## GS/LUGS

---

Percentages of those that indicate they will be challenged in pursuing energy efficiency & load-shifting opportunities:

- Identifying cost-effective conservation opportunities? **50%** / **65%**
- Availability of Internal Expertise to Implement? **60%** / **55%**
- Availability of Qualified External Expertise to Implement? **40%** / **28%**
- Commitment to Conservation by Internal Decision-Makers? **24%** / **33%**
- Commitment to Conservation by Employees? **59%** / **38%**
- Access to Capital to Support Initiatives? **56%** / **54%**

# Analysis Of Actual Response LUGS/GS

---

## Does Usage Reflect a Response?:

- No Control Group designed (yet) for comparison.
- Active PSO Small Commercial & Industrial load research sample used as proxy.

Stratum 1:	Mostly Low-use General Service
Remaining Strata:	Various General Service Tariffs

- Compared aggregation of LUGS TOD Pilot participants to aggregation of Stratum 1 contributors of sample. Compared aggregation of GS TOD Pilot participants to aggregation of contributors to remaining strata in sample.
- Developed normalized average daily load profiles for June for both pairs of groupings as a comparison.

Actual Cost Savings - July Bills

# Next Steps

---

- Continue data collection & analysis (3-year pilot)
- Survey of Non-Participants
- Control Group (augment existing sources or new design/selection)
- Follow-Up Survey of Participants (9-12 months out?)
- Incorporate End-Use Metering Project?
  - Present end-use data to participants
  - Analyze how they respond to the additional information (Another step towards gridSMART™- type functionality)
- Final Analysis (2011)
  - keep best practices
  - identify processes that need improvement
  - provide input to design of more permanent TOD offering
